### **DETAILED ACTION**

1. Claims 1 to 10 are presented for examination. The preliminary amendment filed 7-30-2003 canceled claims 9 to 10.

#### ***Priority***

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119, which papers have been placed of record in the file.

#### ***Information Disclosure Statement***

3. The references listed in the information disclosure statement submitted on 6-14-2004 have been considered by the examiner (see attached PTO-1449).

#### ***Specification***

4. The abstract of the disclosure is objected to because the abstract seems to recite the claim language rather than being a concise statement of the technical disclosure of the patent.

Correction is required. See MPEP § 608.01(b).

5. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

#### **Arrangement of the Specification**

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
  - (1) Field of the Invention.
  - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

### ***Claim Rejections - 35 USC § 101***

6. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1 to 5 are rejected under 35 U.S.C. 101 because Claim 1 is directed to a method of identifying uncorrectable codewords in a Reed Solomon decoder...

Specifically, the claimed subject matter is directed merely to manipulation of data that can be done through software that is not tied to a technology art, environment or

machine which would result in a practical application producing a concrete, useful, and tangible result to form the basis of statutory subjected matter under 35 U.S.C. 101.

***Allowable Subject Matter***

7. Claims 6 to 8 are allowed.

8. The following is a statement of reasons for the indication of allowable subject matter: the instant invention is directed to a detector circuit arranged to identify an uncorrectable codeword, for use in a Reed-Solomon decoder handling errors and erasures, the circuit comprising an indicator unit arranged to indicate an uncorrectable codeword, responsive to the logic unit. The prior art made of record teaches an apparatus for detecting uncorrectable errors through Reed-Solomon decoding, for instance, Iwaki et al. (USP 5414719) teaches an operating circuit of a Galois field that includes an error correction circuit with a Reed Solomon decoding device for detecting errors and erasures of an input data. However, the prior art made of record, taken alone or in combination fails to teach or fairly suggest or render obvious the novel element of the instant invention of "an indicator unit arranged to indicate an uncorrectable codeword, responsive to the logic unit" as claimed in the independent claims.
